

Midterm Report

Jack Hanling

October 7, 2022

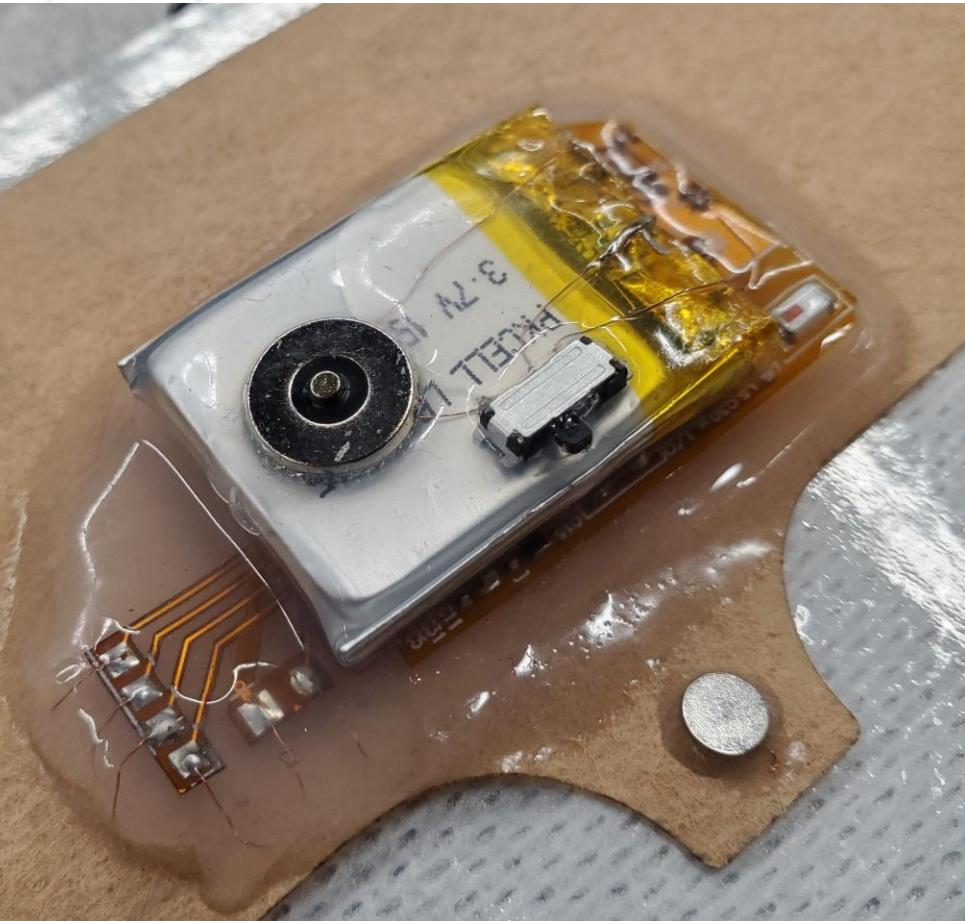

Bio-Interfaced Translational Nanoengineering Group

IEN Center for Human-Centric
Interfaces and Engineering (CHCIE)

Project Overview

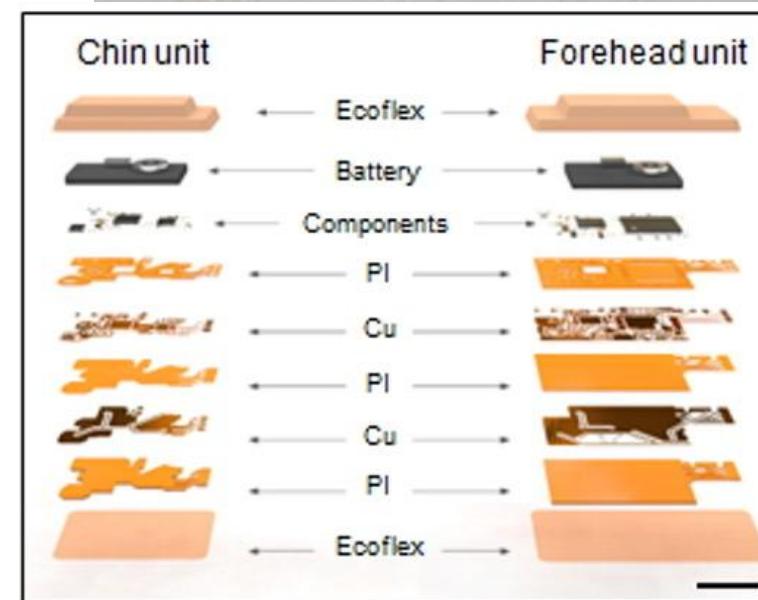

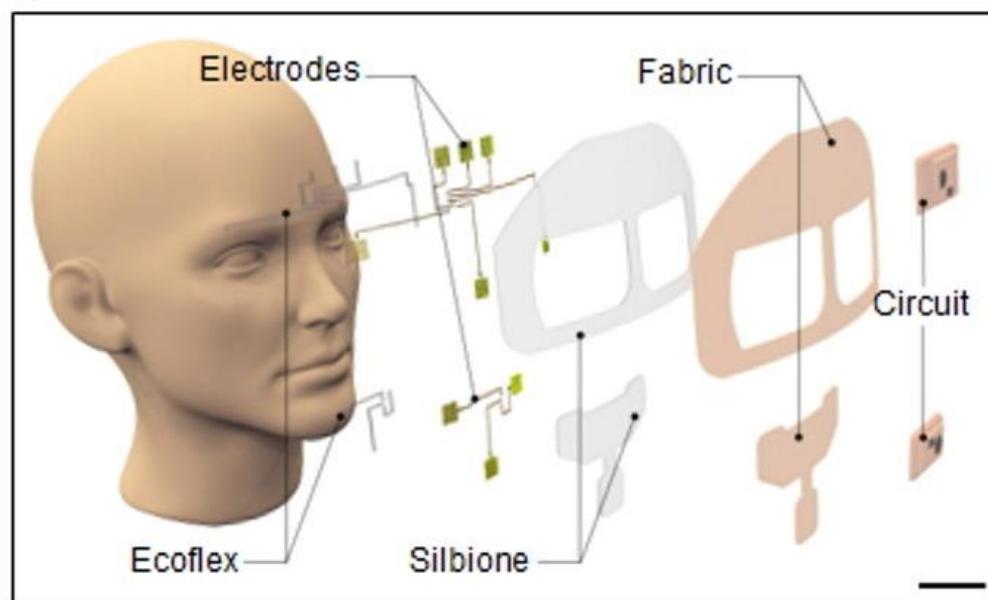

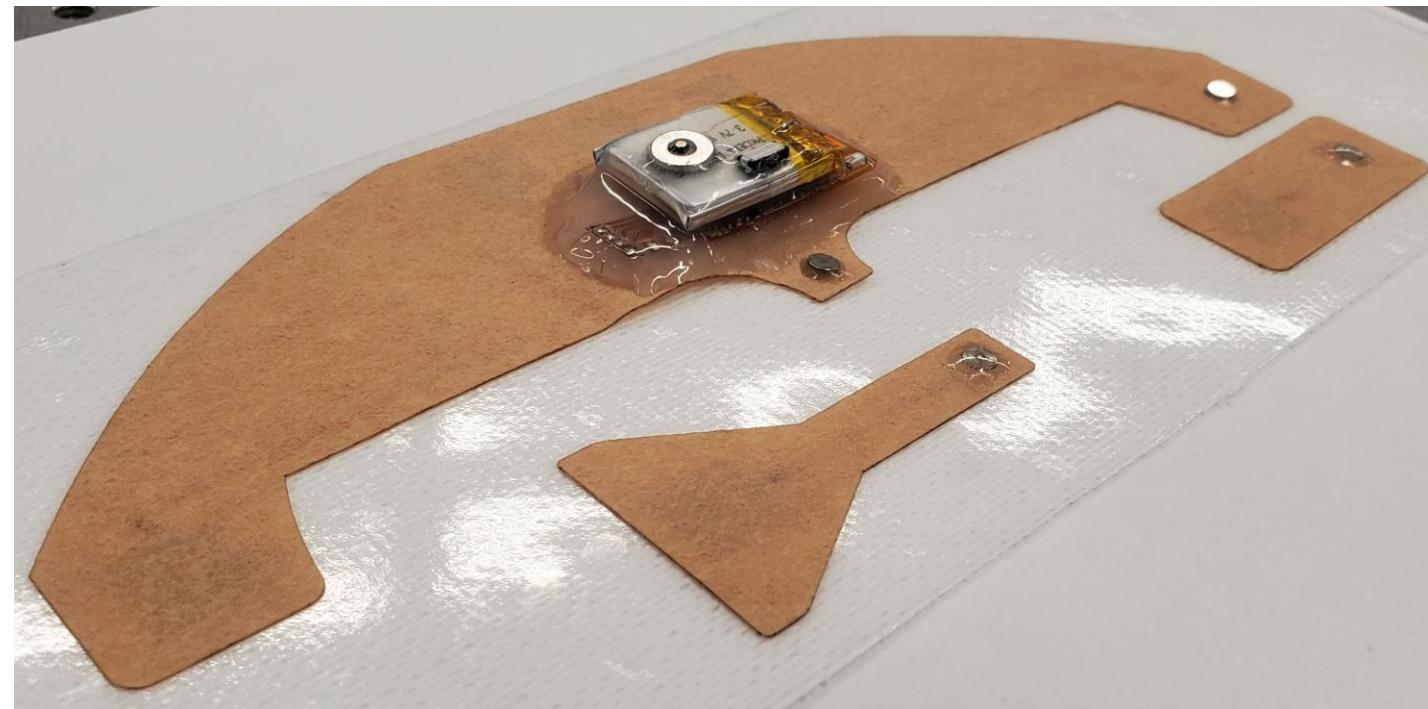

- **Sleep Stage Classifying Device**
 - Device Monitors EEG and Uses CNN to determine sleep stage and abnormalities
- **Semester Goal**
 - Fabricate Sleep Monitoring Device
- **Midterm Overview**
 - Fabricated Batteries
 - Fabricated Sleep Sensor Circuit

Sleep Device Design

Design Components

- Ecoflex
- Electrodes
- Circuit Component
- Battery

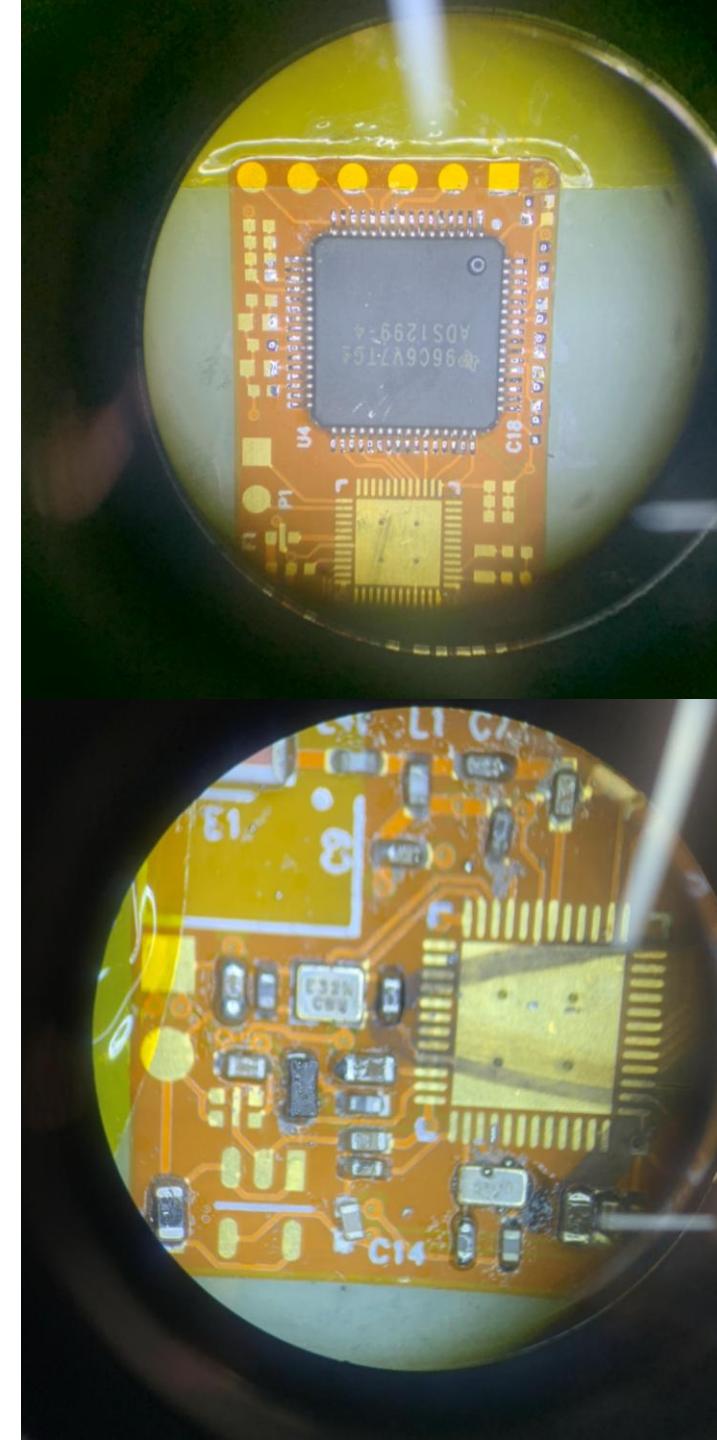

Device Fabrication: Circuit

1. Integrated Circuit Component

- Soldered on the ADS 1299 Component First

2. Surface Mount Soldering

- Used SM soldering to add on the smaller components such as resistors, capacitors, inductors, crystals, etc.

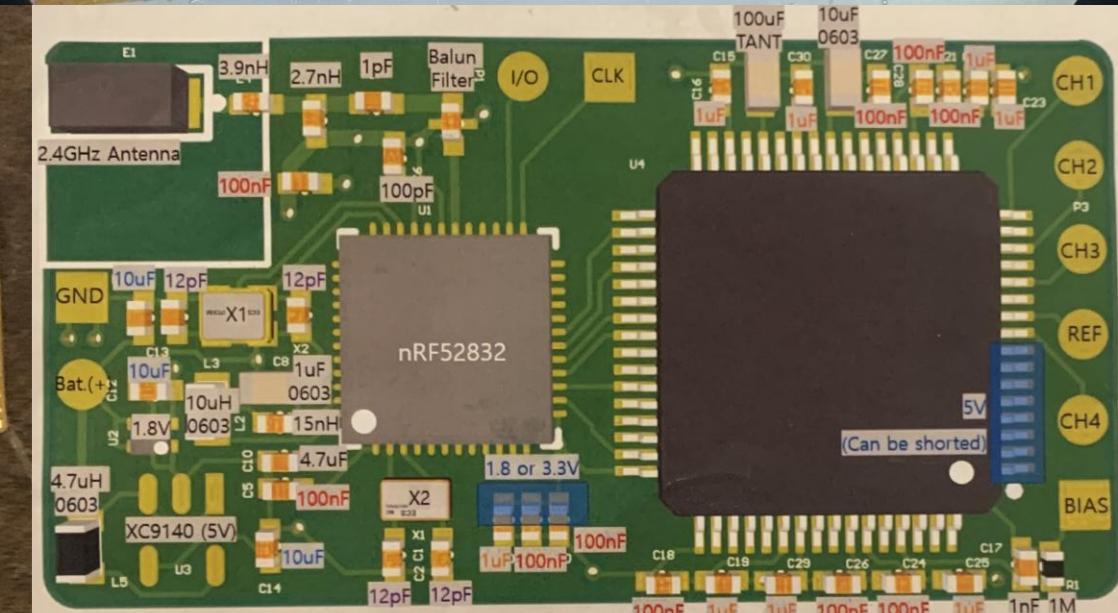

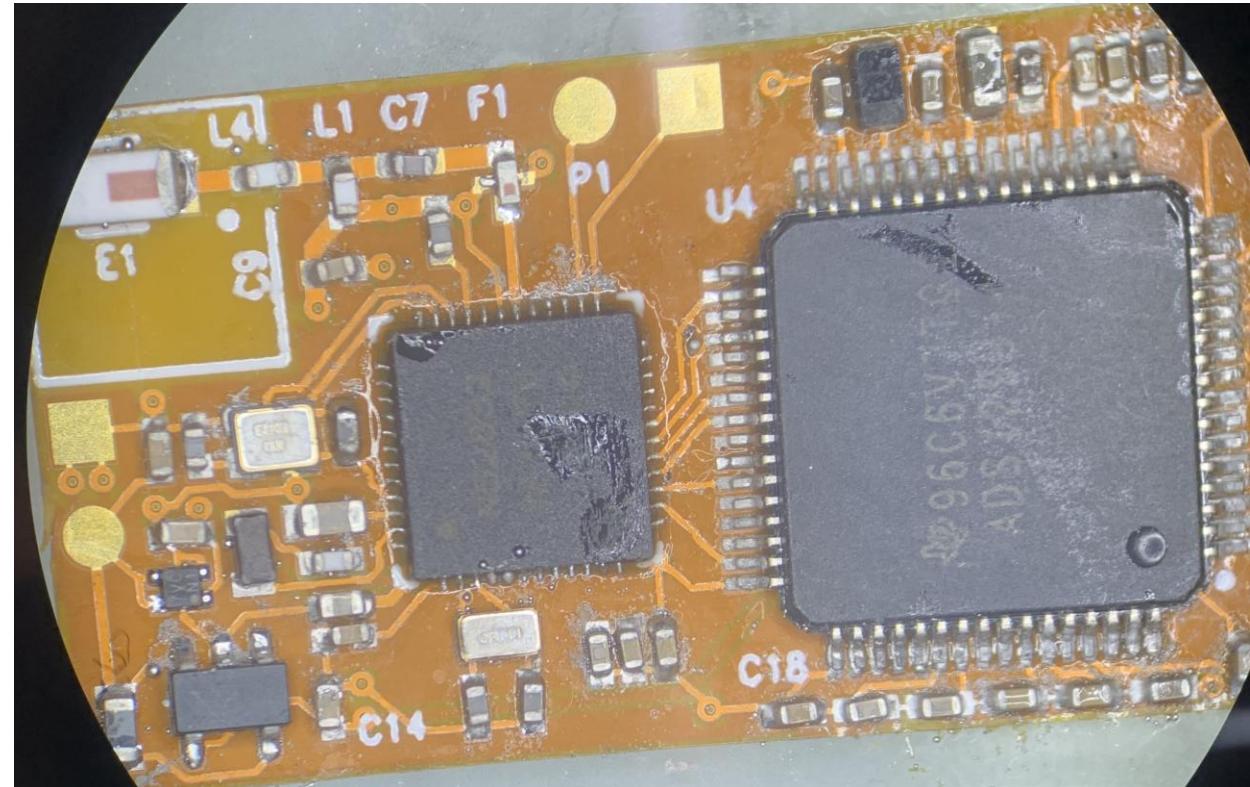

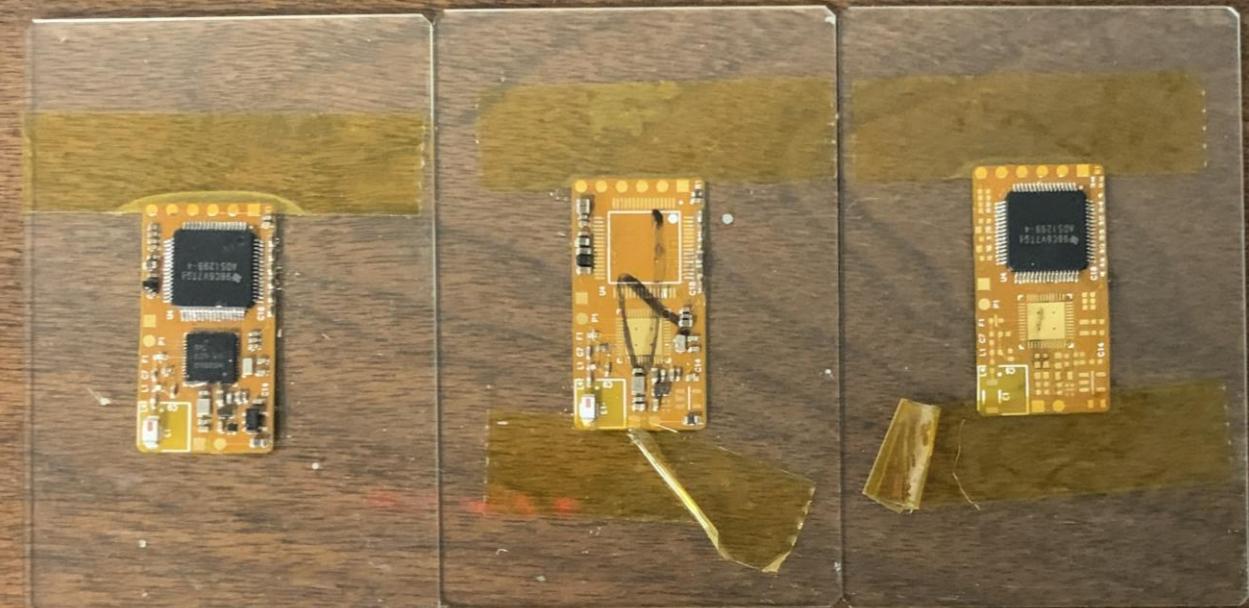

IEN Center for Human-Centric
Interfaces and Engineering (CHCIE)

Device Fabrication: Circuit

Final Product

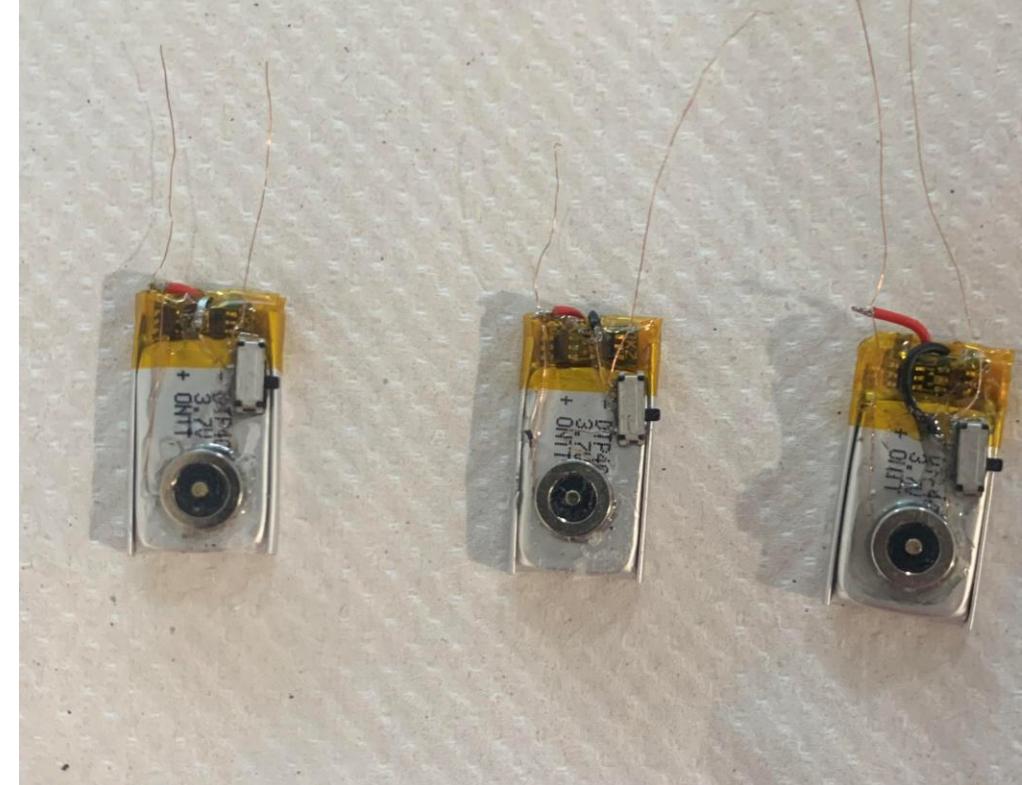

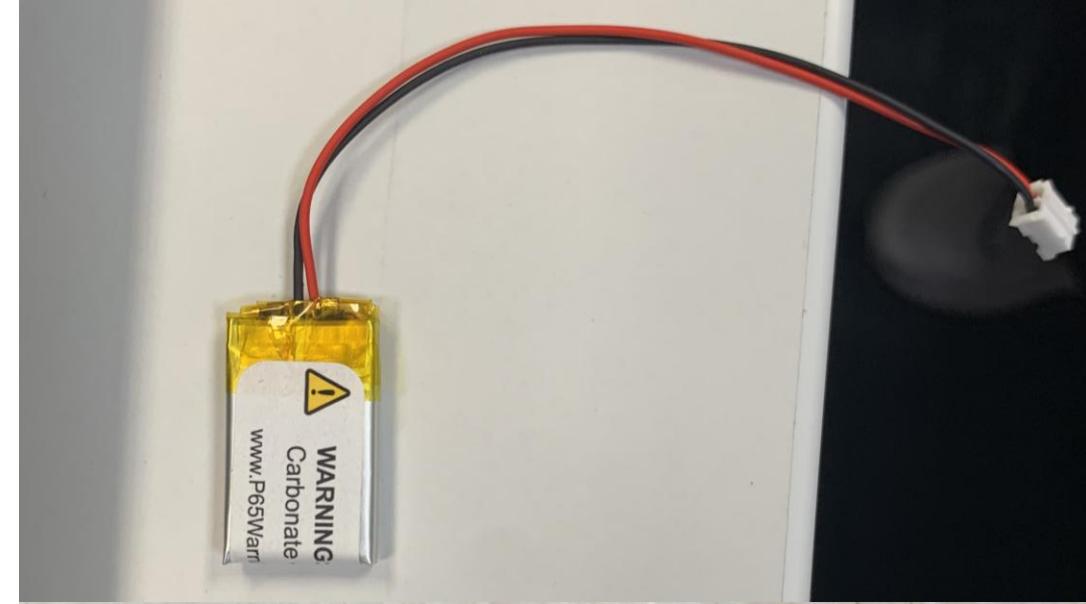

- Development Stages at Bottom
- Final Circuit to the Right

Device Fabrication: Battery

Battery Components

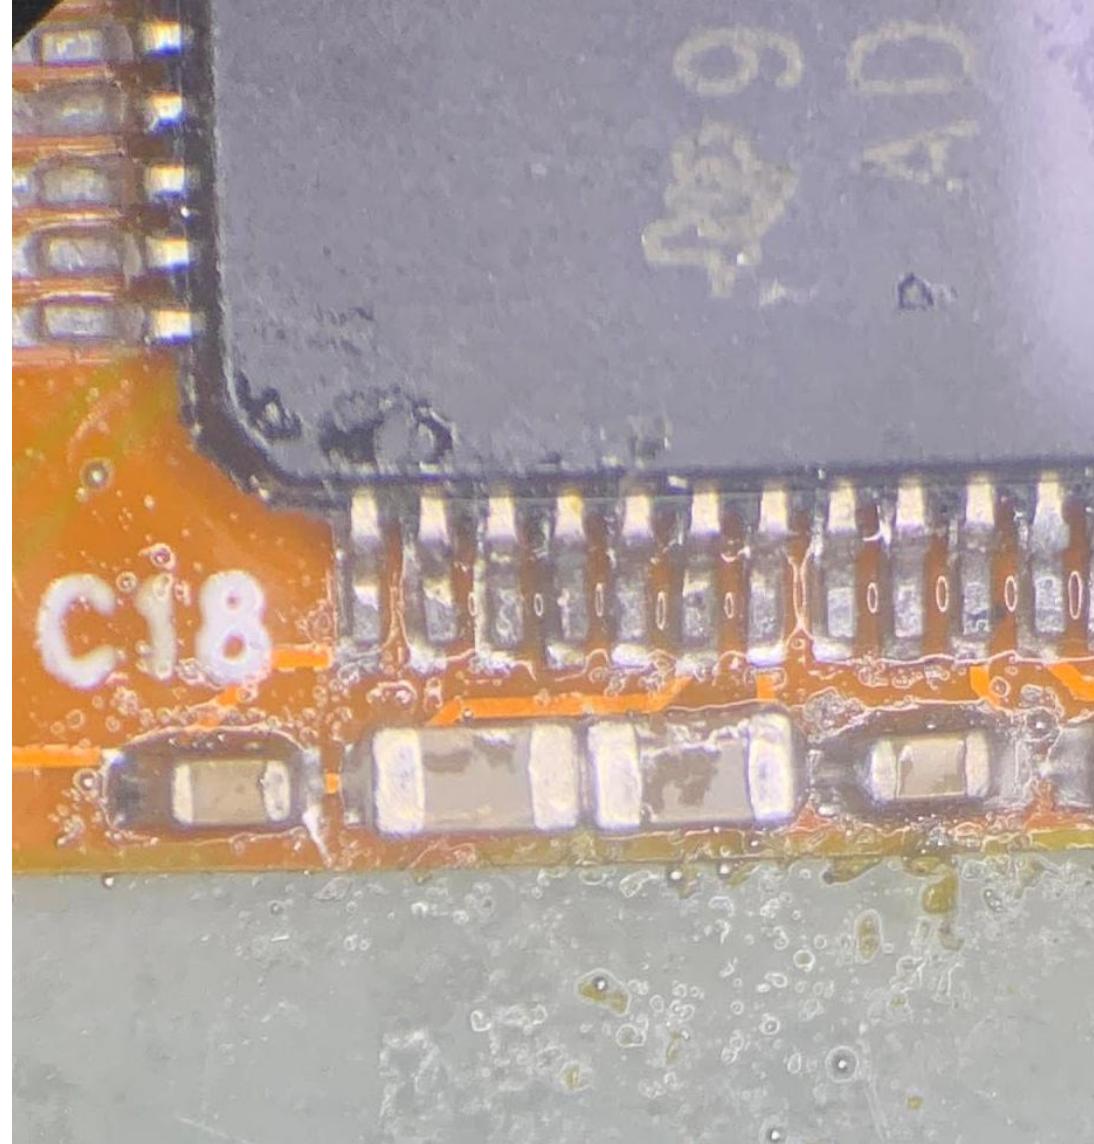

- Battery
- Re-charging Magnet
- Switch
- Copper Wire
- Epoxy Cover

PCB Challenges

Challenges

- Shorting of Components
- Shorting of IC

Next Steps of Integration

- Combined Battery and Circuit to Test
- Make Electrodes
- Encapsulate in Ecoflex
